Widget Corp – A Content Management System.

This Project is CMS based, made for a fictional company called widget-corp. There are 2 main users - the admin and public. It has been written in PHP and has been integrated with a MySQLI database using the MySQLI database API.

Schema for the Database The following description gives you all the details about the CMS.

There are 2 basic work areas in the CMS - the Public Area and the Admin Area.

The functionalities implemented for the Public Area:

Site pages

1. Navigation
2. Page content
3. Read only

The functionalities implemented for the Admin Area can be understood at 3 levels:

Level 1:

Login Page

1. Form
2. Username
3. Password.

Level 2:
